Connect Any Gage into Any Software*

Overview

- The Wedge/USB Base receiver is the latest addition to the MobileCollect Wireless product line
- This new model includes a USB keyboard wedge output, which simplifies the process of sending measurements into programs that require a keyboard wedge solution like Excel, Access, and Minitab
- Recommended solution for cloud-based data collection applications

Using with Excel

- Connect the USB cable to the Wedge output and to a USB port on the data collection computer
- Open Excel program, take a measurement and press the SEND button on the data cable or the transmitter
- Use the same process for sending data into Access, Minitab, and cloud-based data collection applications
